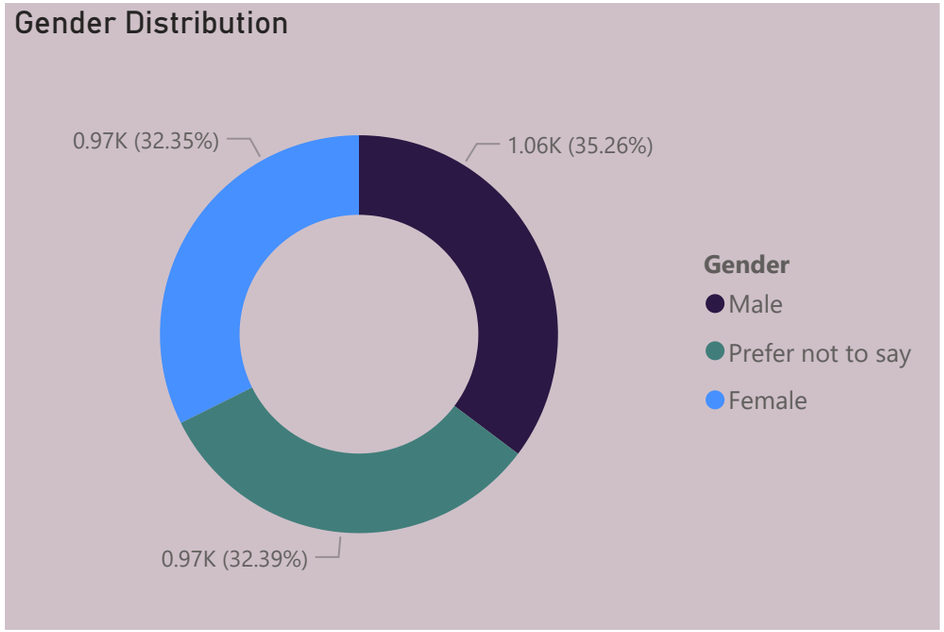
Daily Phone usage

Objective:

The donut chart visually represents the distribution of students based on gender to understand representation.

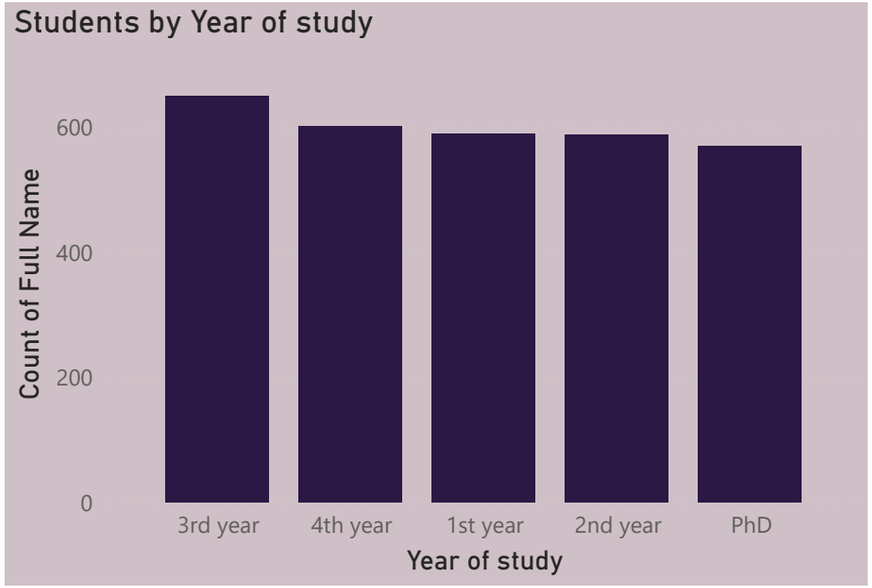


Observation:

The chart shows that male and female students are present in almost equal proportions, indicating a **balanced gender distribution.**

Objective:

This chart compares the number of students from each academic year to identify participation patterns.

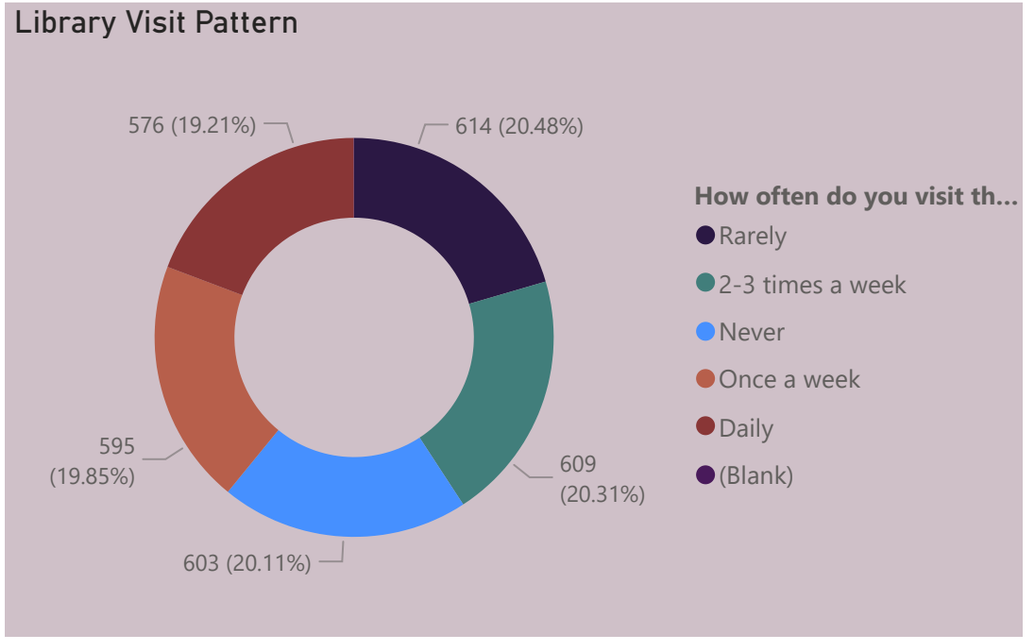


Observation:

It is observed that student counts across all years are fairly similar, with no single academic year dominating the responses.

Objective:

This chart is designed to show how frequently students visit the library.

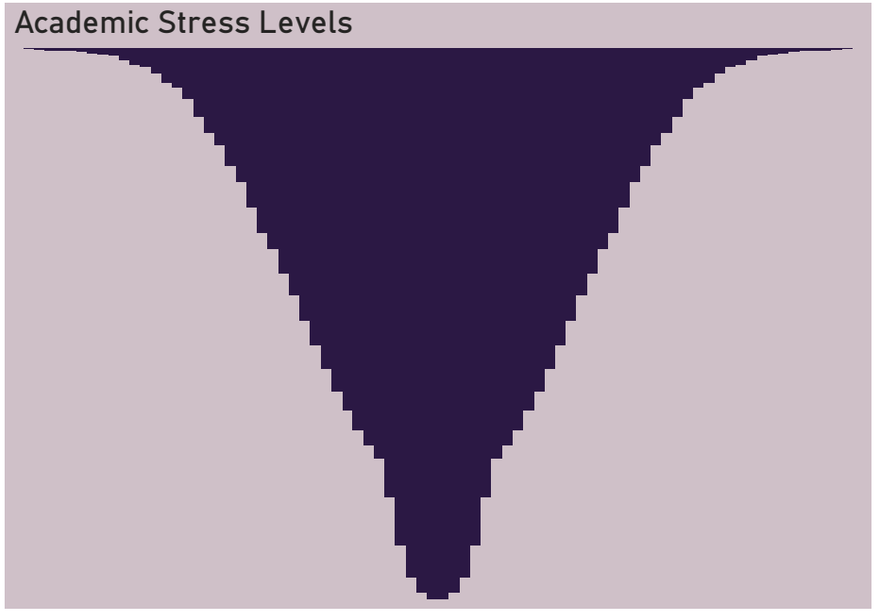


Observation:

Most students visit the library **occasionally**, while comparatively fewer students visit daily or never visit at all.

Objective:

This chart shows how academic stress levels are distributed among students rather than focusing only on the average.

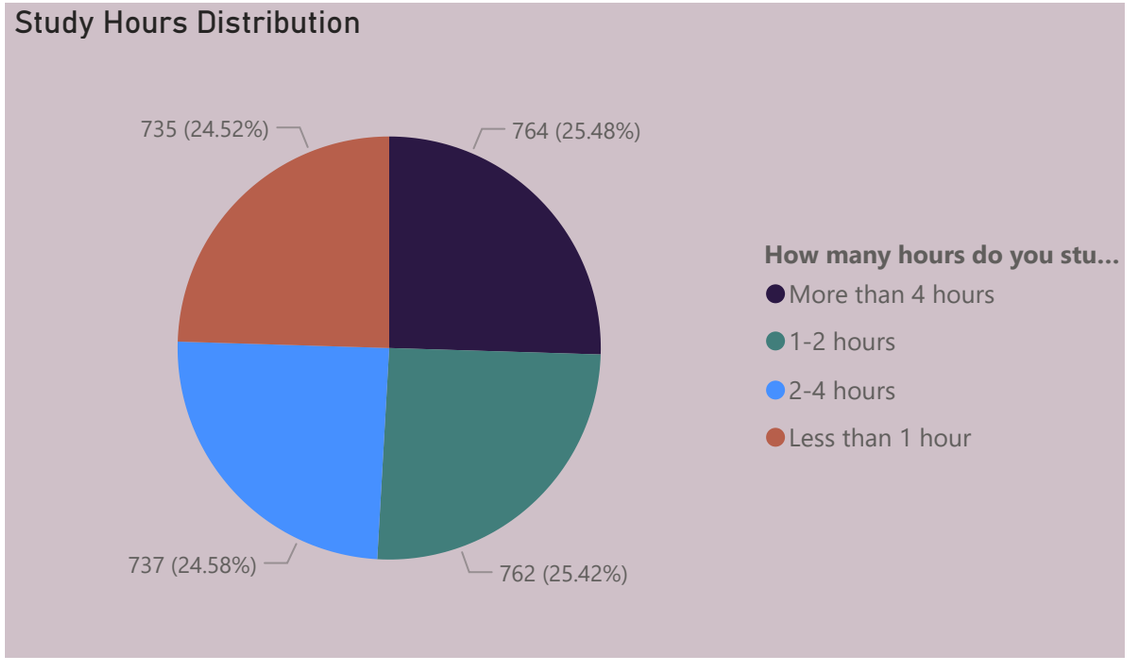


Observation:

The stress values are concentrated around the middle range, meaning most students experience moderate stress rather than extreme stress.

Objective:

This chart represents how much time students spend studying outside regular class hours.



Observation:

The chart shows that most students study between **1 to 4 hours**, indicating balanced study routines.

Objective:

To represent the overall well-being levels of students collected through the survey.

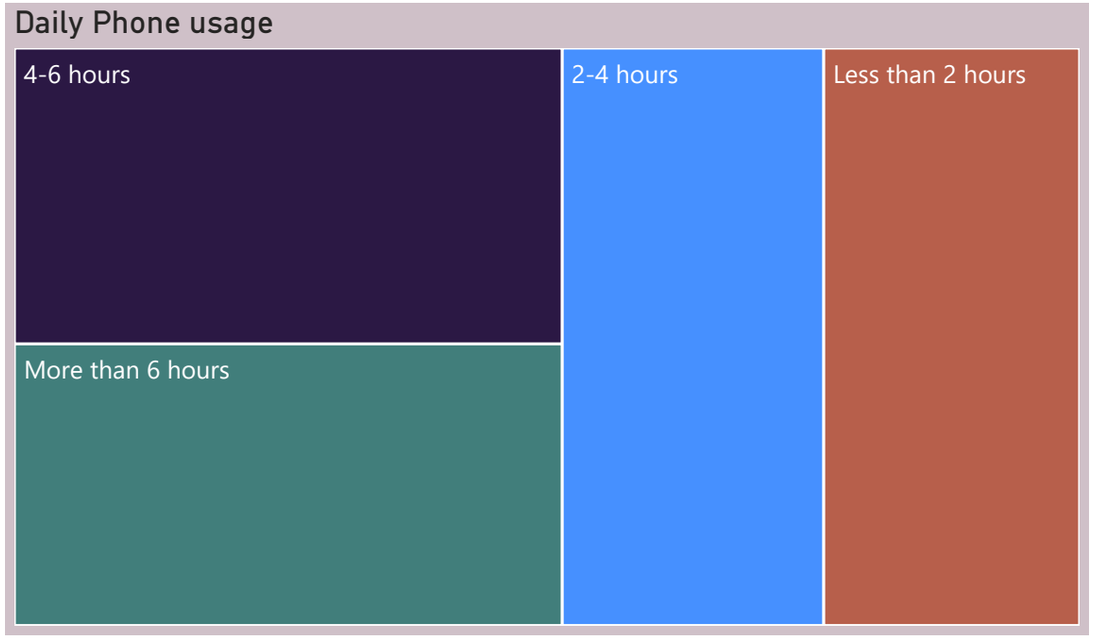
Full Name	Overall Well Being
Priya Dutta	48
Sai Sharma	38
Manish Joshi	37
Ishaan Joshi	35
Rhea Saxena	35
Ishaan Iyer	34
Krishna Rao	34
Nikita Joshi	34
Rohit Patel	34
Arjun Nair	33
Total	**9109**

Observation:

Most students report a **moderate level of overall well-being**, while fewer students fall under very low or very high well-being levels.

Objective:

The treemap is used to visualize the distribution of daily phone usage durations among students.

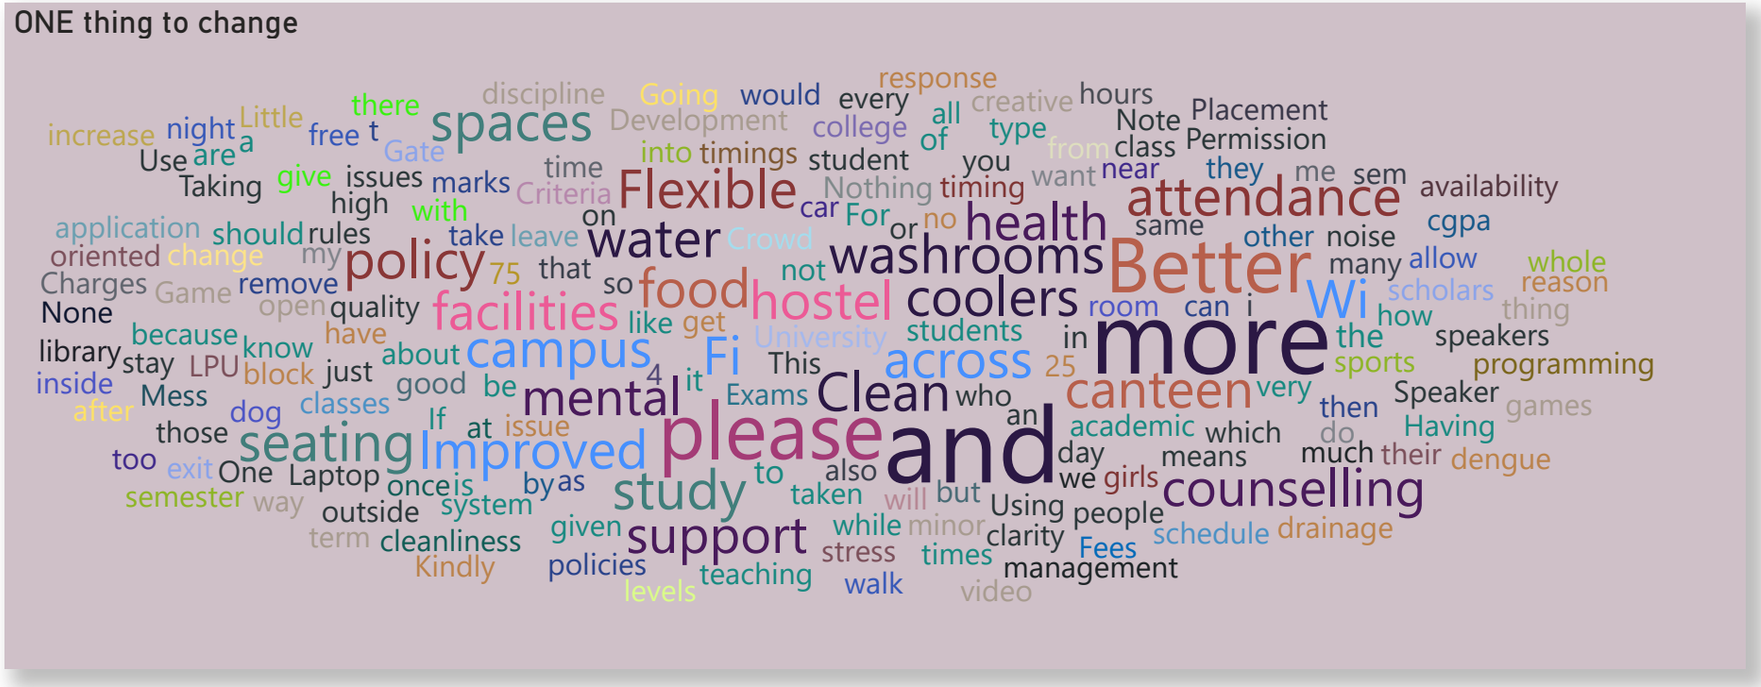


Observation:

A large section of the treemap corresponds to **more than 4 hours of phone usage**, indicating high screen-time among students.

Objective:

The word cloud captures open-ended student responses about what they would like to change on campus.



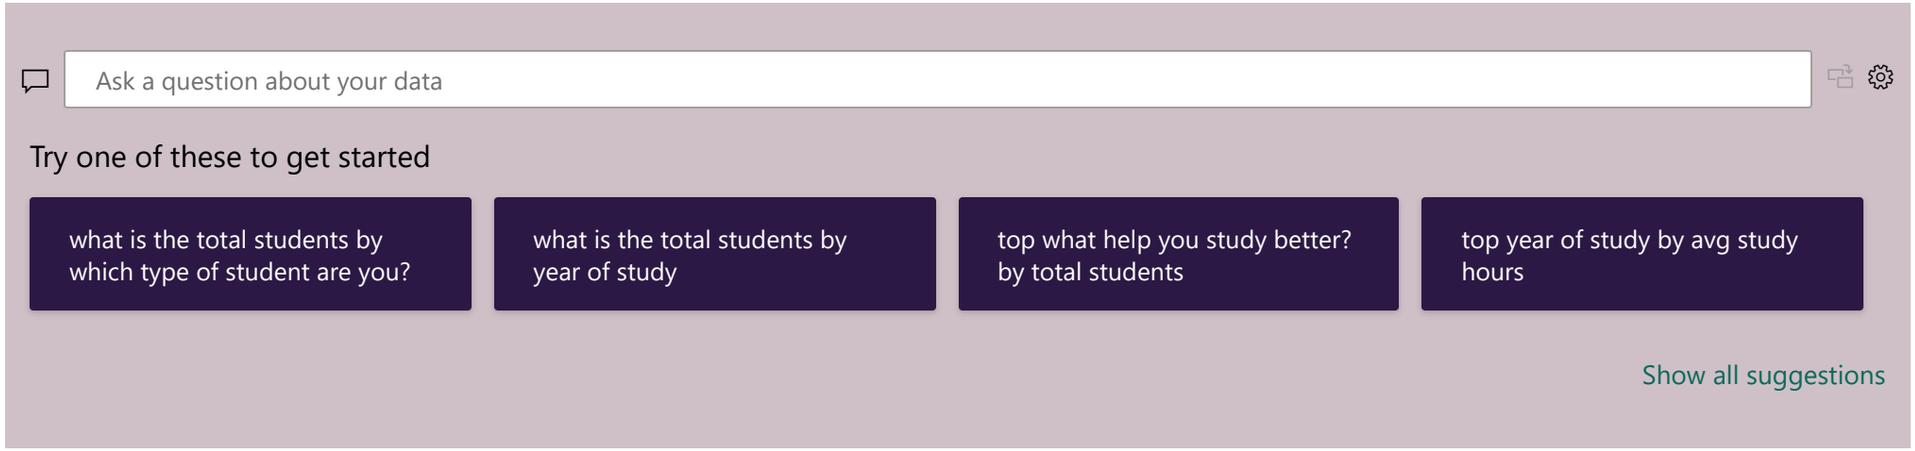
Observation:

Larger words such as **hostel, washroom, wifi, food, and infrastructure** appear more frequently, indicating common concerns among students.

Overall Dashboard

Objective:

The overall objective of the dashboard is to combine multiple aspects of student life—academic stress, well-being, study habits, and lifestyle—into one interactive view using primary data.



Observation:

The dashboard reveals that students generally experience **moderate stress and average well-being**, while lifestyle factors like phone usage and campus facilities strongly influence their experience.
